

CTP Final Project Report

Project Title: Healthy Life - Personal Health & Wellness Website

Student 1 Details

Name: Nodee Kairi

ID: 242055

AUW Email: auw242055@auw.edu.bd

Student 2 Details

Name: Shruti Chakma

ID: 251024

AUW Email: auw251024@auw.edu.bd

Student 3 Details

Name: Mo Hnang Sing Marma

ID: 242215

AUW Email: auw242215@auw.edu.bd

Submission Date: 12 August, 2026

Project Report Guidelines

A project report documents the completed work, explaining objectives, methods, and results. It should be well-structured, concise, and supported with evidence.

General Requirements

- Length: 2–3 pages
- Include visuals (Screenshots of codes, Input, Output)
- Use clear headings
- Maintain formal writing style
- Cite sources if used (i.e. code copied from sources)

1. Abstract

Healthy Life is a simple health and wellness website created to encourage people to follow healthy daily habits. The website provides information about healthy food, exercise, and good sleep. It also includes a random health tip feature and a simple Health Checker. The project was developed using HTML, CSS, and JavaScript.

2. Introduction

The main purpose of this project is to provide simple information about maintaining a healthy lifestyle. Many healthy habits, such as eating nutritious food, exercising regularly, and getting enough sleep, can improve our daily life.

Our website is designed to present these habits in a simple and attractive way. It has four main sections: Home, Health Tips, Health Checker, and Contact. The Health Checker also gives users a basic wellness suggestion based on their sleep and exercise information.

3. Methodology / Implementation

We used HTML, CSS, and JavaScript to develop the website.

HTML was used to create the structure of the website, including the navigation bar, health information cards, input fields, buttons, and footer.

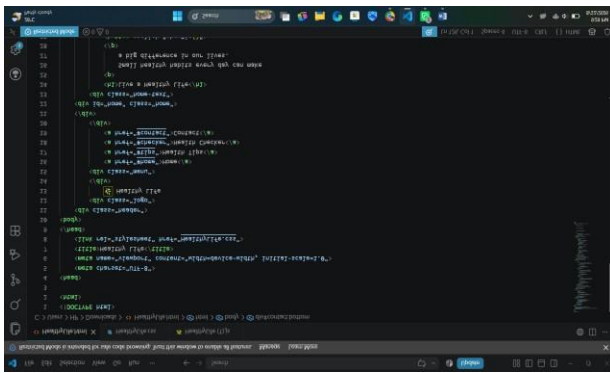

CSS was used to design the website. We used a green color theme, background images, cards, buttons, spacing, and shadows to make the website clean and attractive.

JavaScript was used to add interactive features. The Get a Healthy Tip button randomly displays one of four health tips. The Health Checker takes the user's age, sleep hours, and daily exercise time and gives a simple suggestion based on the sleep and exercise values.

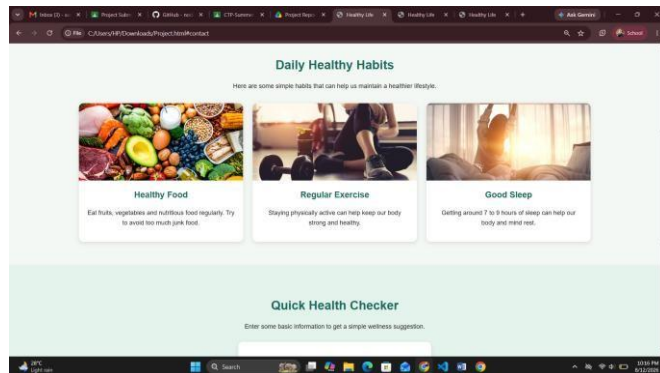

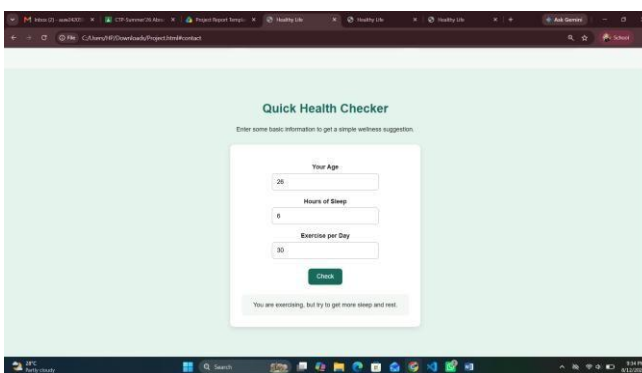

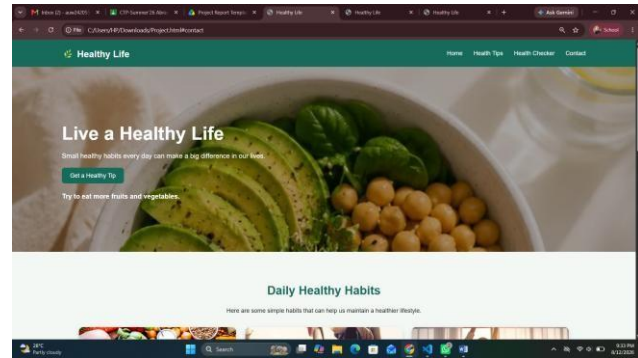

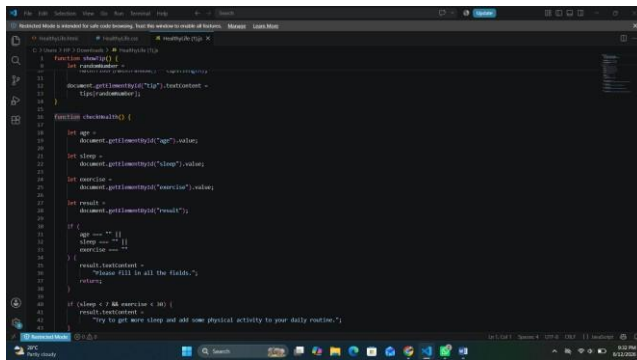

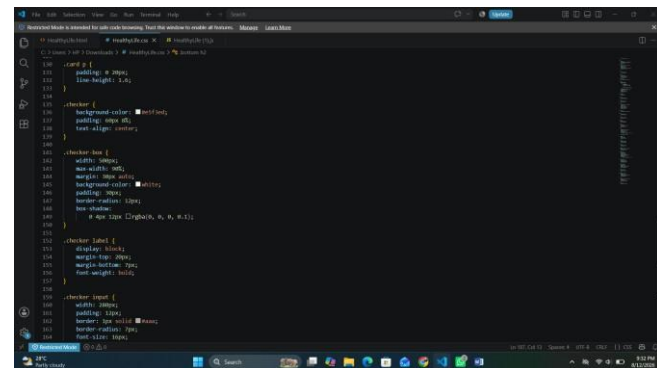

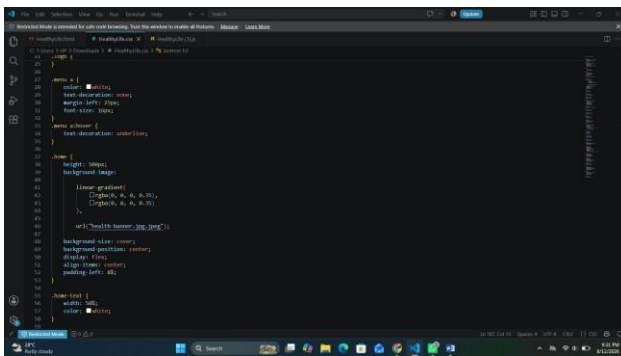

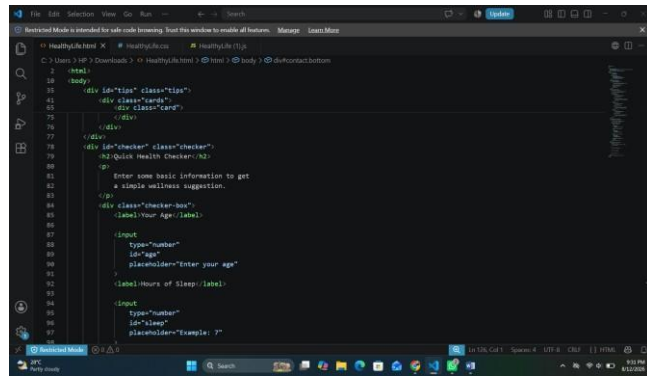

4. Results / Output

The final website successfully includes all the main features planned for the project. Users can view health tips, receive a random healthy tip, and use the Health Checker.

The Health Tips section contains three main topics: Healthy Food, Regular Exercise, and Good Sleep. The Health Checker also provides different messages depending on the user's sleep and exercise information.

5.

Challenges and Limitations

One challenge was connecting the HTML elements with JavaScript so that the buttons and Health Checker worked correctly. We also had to organize the CSS properly to make the different sections look clean.

The Health Checker is a basic feature and is not a medical test. It only considers sleep and exercise when giving suggestions. The age entered by the user is currently not used in the calculation.

6. Conclusion and Discussion

Overall, the Healthy Life project achieved its main goal of creating a simple and interactive health website. We learned how HTML, CSS, and JavaScript work together to create a complete webpage.

The project also helped us improve our understanding of webpage structure, styling, user input, and JavaScript functions. Although the Health Checker is simple, it makes the website more interactive and useful for users.

7. Future Work

In the future, we could add more health tips and include other factors such as water intake, diet, and daily activities. The Health Checker could also be improved by using the user's age and providing more detailed suggestions.

We could also make the website more responsive for mobile phones and add more interactive features.

8. References

* HTML, CSS, and JavaScript learning resources (YouTube, Google, Websites, ChatGPT) used during development.

* Sources of the images used in the website, if downloaded from external websites.

9. Individual Contributions

Student 1 – Nodee Kairi , ID: [242055]

Worked on [HTML]

Student 2 – Shruti Chakma, ID: [251024]

Worked on [JavaScript].

Student 3 – Mo Hnang Sing Marma, ID: [242215]

Worked on [CSS].
